

Sanju Antony

Highly skilled Blockchain & Backend Developer with 2 years of experience at [lonixx technologies](#), specializing in Ethereum-based smart contracts, dApp development, and robust web technologies. Proficient in Python (Django) and Node.js (Express.js, NestJS) for building efficient, real-time applications. Passionate about integrating AI services and architecting decentralized systems to drive innovation in modern software stacks

Place: Tamil Nadu, India.

EXPERIENCE

Blockchain & Smart Contract Development

- Led research and development for a "Real Estate Tokenization" project, focusing on blockchain fundamentals and token standards.
- Developed and audited smart contracts on the Ethereum network using Solidity, including ERC-20, ERC-721, and multisignature wallet contracts for decentralized applications (dApps).
- Utilized a comprehensive tech stack for blockchain development, including Node.js for backend integration, and Hardhat, Ethers.js, and MetaMask for testing and deployment.

Python and Web Development:

- Proficient in Python programming, applying object-oriented (OOP) and functional programming paradigms for robust application development.
- Experienced in Django framework, building scalable web applications using its Model-View-Controller (MVC) architecture.
- Adept in Node.js development, leveraging its asynchronous and event-driven nature for real-time applications and server-side scripting.

AI Development & Anthropic Services (Current)

- Currently leading R&D initiatives on Anthropic services and features, exploring and integrating advanced AI capabilities.
- Architected and developed a Minimum Completable Product (MCP) server and client to provide structured context for AI interactions, enhancing AI accuracy and relevance.
- Conducted in-depth analysis of AI tooling, models, and best practices, informing strategic decisions for application development and optimizing workflow efficiency.

EDUCATION

Mar Ephraem College of Engineering and Technology | Kanyakumari, Tamil Nadu

Bachelor of Engineering in Mechanical Engineering | June 2018 – April 2022

CGPA: 7.82

PROJECTS

Mifos

Successfully migrated assigned Java 1.6 Spring Boot APIs to Python Django APIs, ensuring seamless transition and improved performance.

Overcame initial challenges with unfamiliar Java APIs and Django by rapidly acquiring necessary knowledge, completing all assigned migrations ahead of schedule.

real estate tokenization

Conducted in-depth market analysis of real estate sectors in the USA and UAE to inform the design of a blockchain-based tokenization platform.

Developed Solidity smart contracts on the Ethereum network and L2 solutions, creating ERC-20 and ERC-721 (NFTs) tokens to represent real estate assets.

Implemented multi-signature wallet contracts to enhance security and streamline asset management.

SKILLS

Blockchain: Solidity, Ethereum, ERC-20, ERC-721, Smart Contracts

Programming Languages: Python, JavaScript (NodeJS)

Frameworks: Django, Node.js (Express.js, NestJS)

Databases: MySQL, PostgreSQL, Neo4j

Tools & Technologies: Git, Docker, Hardhat, Ethers.js, MetaMask

Web Technologies: HTML/CSS

LANGUAGES

Tamil: Fluent

English: Proficient

Malayalam: Basic

Personal Financial Dashboard Application (name is Confidential)

Developed a confidential application providing users with a unified view of their financial assets and liabilities (e.g., bank balances, loans, credit card debt, investments) with user consent.

Targeted markets included the USA, India, European countries, and UAE (Dubai).

Integrated with Plaid services for USA financial market data.

Analyzed Account Aggregator frameworks and RBI guidelines (Sahamati) for consent-based financial data access in India.

Project currently pending due to regulatory approvals and licensing.

Ionixx GPT (current project)

Developed an AI Chatbot using Anthropic's Large Language Model (LLM), enhancing conversational capabilities.

Implemented a custom Minimum Completable Product (MCP) server to provide consent-based custom context of specific data or functionalities to the AI.

Integrated advanced features such as web search, code execution, and stream messaging for comprehensive AI interaction.
